STAFF SOFTWARE ENGINEER

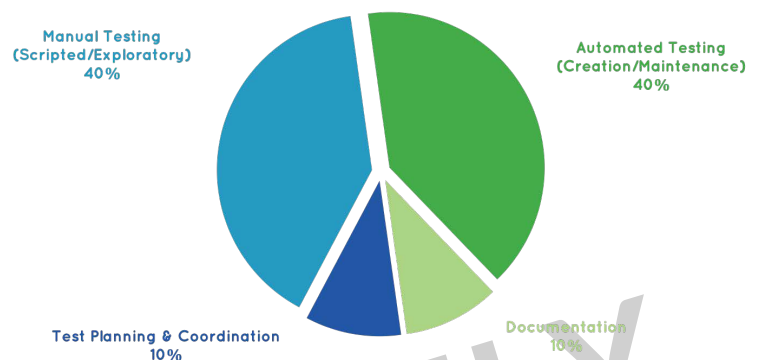

JOB DESCRIPTION

Milyli is hiring a Staff Engineer to guide the technical design and development of our enterprise legal software Blackout for Relativity. You will work with your peers and teammates in Product Management and Engineering to ensure the successful delivery of Milyli's software products. We are looking for someone with the experience, technical expertise, and flexibility to take architectural ownership of our products and help build a collaborative, team-centric environment.

Blackout is an automated redaction tool built on top of the Relativity platform. To date, Blackout has placed nearly 1.4 billion redactions on ~6 million different documents. Blackout's built with a variety of technologies, including:

- ASP.NET MVC 5
- Microsoft SQL Server
- Tesseract OCR
- Typescript / Vue.JS
- Hangfire

YOUR DAY AT A GLANCE

Your Responsibilities

- Understand our users' business problems to best impact solution development
- Guide the team in discovering the best possible approaches to building new software features throughout the software development lifecycle
- Mentor teammates through problem-solving, code reviews, peer programming, and other learning opportunities
- Continue evolving the Milyli culture of collaboration and learning.
- Write usable, effective, and maintainable code and automated tests that you are proud of
- Troubleshoot issues and solve problems alongside our Engineering and Customer Advocacy teams

Your Qualifications

- Significant professional experience with .NET Framework / ASP.NET MVC
- Professional experience working with relational databases
- Professional experience working with distributed systems
- Able to communicate complex technical issues and propose solutions for them
- Self-starter, who proactively identifies problems and drives for resolution
- Experience with automated test design and tools for unit tests, automated API tests, automated UI tests, and others as needed
